PIER TECHNOLOGIES LIMITED

01 / COMPANY

Software for real-world needs.

A full-service software development company focused on custom web and mobile solutions across diverse industries.

Pier Technologies brings product design, software engineering and cloud capabilities together to help organisations turn complex requirements into practical digital products.

One connected technology offer.

Web + mobile
Design + engineering
APIs + cloud

WHAT SHAPES THE WORK

01 Business context first

Solutions tailored to the way an organisation operates, its users and its industry.

02 Useful by design

Human-centred interfaces, accessibility and clear experiences across devices.

03 Built for the long term

Security, performance and maintainability considered alongside functionality.

02 / CAPABILITIES

From interface to infrastructure.

Specialist services that can work together as one product engagement or support a specific technology need.

Web development

Custom applications, business portals and enterprise dashboards built for security, performance and maintainability.

Mobile applications

Native iOS and Android or cross-platform experiences, with secure authentication, offline sync and API integration.

UI/UX design

Research, UX strategy, wireframes, design systems and accessible interfaces that make products easier to use.

APIs & integrations

REST and GraphQL services that connect new products with existing platforms and business systems.

Cloud & DevOps

Cloud architecture, infrastructure, CI/CD and observability to support reliable releases and operation.

Quality & security

Testing, database design, security and compliance considerations across the software lifecycle.

03 / INDUSTRIES

Different sectors. Specific needs.

Industry-focused software shaped around each sector's workflows, data, users and operating requirements.

01

Government & public sector

Citizen service portals, case management and public records platforms.

02

Healthcare & medical

Patient portals, telemedicine, health records integration and reporting.

03

Education & e-learning

Digital learning platforms and software for education workflows.

04

Finance & banking

Web and mobile financial experiences and connected business systems.

05

Retail & e-commerce

Online commerce platforms and software for retail operations.

06

Real estate

Property management applications and digital service experiences.

07

Manufacturing & logistics

Operational software for production, coordination and logistics.

08

Hospitality & tourism

Digital platforms for hospitality services and tourism businesses.

Requirements for security, accessibility and compliance are scoped per project.

04 / DELIVERY & ENGINEERING

A clear path from idea to operation.

A practical engagement framework for discussing the scope, delivery and long-term needs of your software.

01

Understand

Define the business problem, users, constraints and success criteria.

02

Design

Map key journeys, agree priorities and shape the product experience.

03

Build & validate

Develop the solution, connect systems and test critical workflows.

04

Launch & support

Plan deployment, operational visibility and ongoing improvements.

ENGINEERING FOUNDATIONS

Modern web frameworks / Native & cross-platform mobile
API integration / Database design / Cloud infrastructure
Automated delivery / Observability / Testing & security
